ABSTRACT OF THE DISCLOSURE

An optical glass for polarizing optical system having a photoelastic constant C in the range of -0.2 to +0.5 [10^{-8} cm²/N] with respect to a wavelength of 633 nm, the optical glass having the following composition (1):

composition (1): when represented in terms of wt.% of oxides:

 SiO_2 : 17.0 - 27.0 % (35.5 - 57.0 mol%) Li_2O + Na_2O + K_2O : 0.5 - 5.0 % (0.7 - 20.0 mol%) PbO: 72.0 - 75.0 % (39.1 - 45.0 mol%) As_2O_3 + Sb_2O_3 : 0.1 - 3.0 % (0.1 - 2.0 mol%).
